SENSYS AMERICA AND GULF BREEZE RENEW CONTRACT

Sensys America Continues to Save Lives with Red Light Cameras in Gulf Breeze, Florida

ORLANDO, FL (April 25, 2018) – [Sensys America](http://www.sensysamerica.net), a leading provider of advanced technology for traffic safety enforcement, is proud to announce the City of Gulf Breeze, Florida has renewed its red light camera photo enforcement contract. Gulf Breeze also added Automated License Plate Recognition (ALPR) to its product of services from Sensys America to assist with criminal investigations.

Since 2011, Sensys America has provided the City of Gulf Breeze with red light cameras. This traffic enforcement technology is saving lives every day. Accidents from red light running are the most preventable accident, while T-bone crashes from red light running can cause the most injury and deaths. With red light systems located at dangerous intersections throughout the City, Sensys America's red light cameras are changing driver's behavior and decreasing red light running.

The program is cost-neutral for the city and generates money for public safety efforts, such as the latest hiring of a school resource officer.

"Gulf Breeze's red light camera enforcement program is the oldest in Florida and we are grateful for the long-term trust the city has placed in our proven technology. We know we are saving lives in Gulf Breeze and look forward to many more years providing our advanced technology," said Carlos Lofstedt, President and CEO of Sensys America.

About [Sensys America](http://www.sensysamerica.net)
